Jane Doe¹, John Smith², and Alice Johnson¹

¹*Department of Economics, Harvard University*

²*Department of Statistics, Stanford University*

January 3, 2026

This is the abstract of the paper.

1. Introduction

This section introduces the research¹.

This is a standard in-text citation (Einstein, 1905).

As discussed by Wooldridge (2010), econometrics is complex.

2. Background

This section reviews the background.

3. Methodology

The section details the methodological approach.

$$y_i = \beta_0 + \beta_1 x_{i1} + \beta_2 x_{i2} + \epsilon_i \quad (1)$$

Where β represents the coefficients and $\epsilon_i \sim N(0, \sigma^2)$.

4. Results

Table 1 presents the summary statistics.

TABLE 1. Summary Statistics

| Variable | Mean | Std. Dev. | N |
|------------|--------|-----------|-------|
| Income | 54,000 | 12,500 | 1,000 |
| Education | 14.2 | 2.1 | 1,000 |
| Experience | 8.5 | 5.4 | 1,000 |

Notes: Data sourced from the 2023 Annual Survey.

5. Conclusion

This section summarizes the conclusions.

¹This is an example of a footnote.
